

# PILLOLE DI IA: LA NUOVA FRONTIERA DOTT. NICOLA GRANDIS

Nicola Grandis is the founder and chief executive officer of Asc27. Graduated in Information Technology from the University of Bologna, he started his career in the Cyber Security field working with large multinational corporations. In 2001 started his own business with the company Total Wire and worked for twenty years on software and hardware development. His extensive experience brought him to meet a new challenge in 2020, right in the middle of the Covid-19 world pandemic situation. With a strong background in IT consultancy, he launched the innovative start-up ASC27 achieving important results in the field of Cyber Security and Artificial Intelligence, cooperating worldwide with large enterprises and governments. In early July 2021, ASC27 was awarded in the WAIC (World Artificial Intelligence Conference in Shanghai) in two categories: 'Best European Startup' and World TOP10 in the BPAA (Best Practice Applied Algorithms, the scientific competition of the WAIC) with its ASIMOV product, a solution dedicated to AI journalism and content creation.

## AI, a changing era technology

Recent advancements in artificial intelligence, particularly Large Language Models (LLMs), have profoundly influenced business processes, decision-making, and customer interactions. This presentation offers a concise scientific overview of essential considerations for developing LLMs—including model architecture, training methods, scalability, resource optimization, and data privacy—and highlights their practical applications in enhancing productivity and customer engagement.
