

DOMANDA N. 3

3. L'apporto della biblioteca allo sviluppo della Scienza aperta: scenario, fonti normative europee e nazionali applicabili, opportunità e criticità per lo sviluppo di nuovi servizi.

TESTO DA LEGGERE E TRADURRE:

3.

The advancement in technologies and the resultant effect of broadening the horizon of scholarly communication have driven universities to be more 'research centric', in line with their objective of advancing the frontiers of knowledge. As such, the production of research in universities has experienced a drastic increase in recent times. The International Association of Scientific, Technical and Medical Publishers (STM) in their 2021 global brief showed that the publication of research articles experienced a growth rate of between 5 and 6.5% (STM, 2021). This was corroborated by Elsevier (cited in Science Business, 2023) when they noted an important growth in scholarly production especially in the Global South.

DOMANDA N. 13

13. Document delivery e prestito interbibliotecario. L'organizzazione del servizio, anche in termini di distribuzione dei compiti tra il personale e tenendo conto delle norme applicabili.

TESTO DA LEGGERE E TRADURRE:

13.

RDM is explained as a research component specifically dealing with proper organization and preservation of research data for the purpose of current and future access and use (Chawinga and Zinn, 2020).

Research data management is simply explained as the intentional or deliberate processes involved in gathering, storing, protecting and disseminating data created or curated during the period of research (Nwabugwu and Godwin, 2020). The overall aim of this unique activity is ensuring there is no loss of valuable and viable research data, and also to promote data sharing and re-use. Appropriate RDM in university libraries today encourages the practice of reproducibility and re-use of data by scholars and researchers.

DOMANDA N. 15

15. La gestione amministrativa e biblioteconomica dei periodici: metodologia, strumenti, soluzioni organizzative.

TESTO DA LEGGERE E TRADURRE:

15.

The activities carried out during the processes of RDM serve as a springboard for collaborations, data reproducibility and the evolution of the research and scholarship landscape.

This reiterates the benefits of proper management of research data in the form of RDM.

University libraries today are institutions trusted with the responsibilities of acquiring, organizing, storing, preserving and disseminating data and information, and these include research data. Payal and Manorama (2019) noted that libraries serve as prime stewards for these responsibilities given the expertise of their professionals in organizing and safeguarding information. Their core mission revolves around the preservation of knowledge, making them well equipped to handle data archiving and curation tasks effectively. Leveraging their extensive experience, librarians have adeptly established institutional repositories, showcasing their proficiency in managing vast amounts of data/information.

PROVA INFORMATICA WORD

Creare un modello di documento (file .dotx) che includa intestazione, piè di pagina, font predefiniti e uno stile personalizzato per i paragrafi (tipo font, grandezza del font, allineamento del testo).

DOMANDA N. 11

11. Metodi, strumenti, fonti normative, soluzioni organizzative per la valutazione delle proposte d'acquisto di risorse bibliografiche.

TESTO DA LEGGERE E TRADURRE:**11.**

Emerald was selected because it contains a large amount of literature in the field of LIS and sits well with the constructs of the study. ProQuest and Google Scholar were selected because they contain a large amount of multi-disciplinary full text articles published by different academic publishers around the world. This aligns well with the global scope of this study. A primary inclusion criterion for literature used in this study was that the studies were published within the last five years (2019 to 2023). Studies published before 2019 were excluded from the study. The researchers reviewed and selected the relevant literature within a two-week period, and completed the entire study within a three-month period while adhering to the highest ethical standards.

DOMANDA N. 16

16. Nell'ambito del processo di Valutazione della Qualità della Ricerca, il/la candidato/a illustri le modalità attraverso le quali può svilupparsi il supporto offerto dalle strutture bibliotecarie al conferimento dei prodotti della ricerca da parte dei ricercatori dell'Ateneo

TESTO DA LEGGERE E TRADURRE

16.

Engaging in data archiving and curation seamlessly aligns with their established responsibilities, reflecting a natural extension of their long-standing commitment in these domains. Although Payal and Manorama's (2019) study explains the imperatives of RDM practices in academic libraries, the study offers limited practical guidance on how libraries can effectively implement these services into their operations. Case studies, examples of successful RDM initiatives and best practices would guide libraries from different regions in the implementation of RDMS. Payal and Manorama's (2019) study is limited to academic libraries in India, thus, the findings lack power of generalization to the global context, and as such, may not represent the global landscape of RDM practice.

Synopsis of research data management in university libraries.

In this digital era, research data are viewed as a product and not just a means to an end. The usefulness of research data is no longer terminated at the point of data analysis and publication of research findings. Research data have become more useful by the practice of data sharing and data re-use in the academic community. The life cycle of research data is no longer linear but now cyclic, where research data are being used by other scholars even after a research project has been completed. Hence, the need for RDM cannot be overemphasized.

PROVA INFORMATICA EXCEL

Imposta l'area di stampa per includere solo le celle A1:D20.

DOMANDA N. 1

1. Formulare una proposta di digitalizzazione di parte del patrimonio bibliografico: criteri di selezione delle opere, possibili finalità della digitalizzazione, norme applicabili.

TESTO DA LEGGERE E TRADURRE

1

The implementation and delivery of research data management services (RDMS) in university libraries are at different levels of realization, most of which are far from satisfactory. There is therefore need for discussions around issues that will stimulate the success of RDM programmes in university libraries. Consequently, this paper discusses data literacy and technological infrastructure as prerequisites for the successful implementation of RDMS in university libraries. The paper discusses data literacy in the context of RDM implementation. It also reveals the various competency areas to focus on in developing a data literate librarian.

PROVA INFORMATICA WORD

TESTO DA LEGGERE E TRADURRE:

4.

The growth in research articles could prompt a corresponding increase in research data.

Taylor (2023) revealed a rapid growth of these data from 2010 to 2023 and projected a 19.2% compound annual growth by 2025. This growth, if not well handled, could result in 'research data overload', where researchers could be overwhelmed by the avalanche of research data in circulation, beyond their ability to effectively and efficiently utilize them. This reinforces the need for research data management (RDM), which has emerged as an issue of concern to researchers and academics in universities around the world.

PROVA INFORMATICA EXCEL

Generare una tabella con 2 colonne; nella prima colonna inserire i nomi (come nome città, cognomi, ecc.) e nella seconda, i valori numerici, in modo casuale (esempio: 4,7,14,1,3,10...).

DOMANDA N. 37

37. Quale può essere il ruolo della biblioteca nell'ambito dei programmi per la Digital literacy?

TESTO DA LEGGERE E TRADURRE:

37.

Additionally, the participants of the study stressed the significance of understanding interrelationships among data, modifying data for use in various contexts and combining diverse data in a strategic way, as areas of consideration in the development of data literacy.

As university libraries teach information literacy skills as part of their training programmes, they must begin to teach data literacy in the same manner, given that the trend in knowledge currently favors issues around research data. This is why Nwagwu (2024) advocates the teaching of data literacy in academic libraries, which would add to their research support portfolio.

DOMANDA N. 32

32. I sistemi di Information Discovery per l'integrazione bibliografica delle collezioni locali e online: caratteristiche tecniche e possibili indicatori per valutarne la qualità, anche alla luce delle "funzioni utente" del IFLA Library Reference Model.

TESTO DA LEGGERE E TRADURRE:

32.

Without a robust knowledge of the data, and by extension RDM, RDM implementation in university libraries will be an effort in futility. This aligns with the assertion of Koltay (2019) that without data literacy education, RDM is inconceivable since those who will utilize the data must be taught how to comprehend, analyse and apply their findings. By implication, LIS professionals need to be trained to become data literate as a prerequisite for the successful implementation of RDM programmes and delivery of RDMS in university libraries.

PROVA INFORMATICA EXCEL

DOMANDA N. 29

29. Information literacy dal supporto alla didattica istituzionale al public engagement. Come strutturare un corso aperto anche al pubblico esterno e quali iniziative prendere per renderlo efficace, coinvolgendo il personale della biblioteca

TESTO DA LEGGERE E TRADURRE:**29**

Data literacy as a requirement for RDM implementation in university libraries.

Data from research activities are the core element of every RDM practice. It is therefore critical that the deployment of RDM in university libraries require that the personnel who will be involved in RDMS have gained mastery in the handling of research data. This mastery, which connotes data literacy, encompasses 'the ability to identify, collect, evaluate, analyze, interpret, critique, present, and protect data' (Central Michigan University (CMU) Libraries, 2023).

DOMANDE N. 18

18. L'organizzazione dell'approvvigionamento delle risorse bibliografiche e documentali in forma elettronica e cartacea: il/la candidato/a illustri metodi e soluzioni tecniche, soffermandosi in particolare sulle procedure per la stipula dei contratti per l'accesso alle risorse elettroniche.

TESTO DA LEGGERE E TRADURRE:

18.

Thus, undertaking the tasks of data archiving and curation seamlessly aligns with their established expertise (Baily, 2023; Tammaro et al., 2019), marking a continuation of their efforts in maintaining and preserving valuable knowledge resources. However, Hombali's (2022) assertion lacked empirical support as it relied solely on secondary sources. The lack of empirical evidence in the form of surveys or case studies limits the ability to reach an objective and strong conclusion about the effectiveness of librarians in the delivery of RDMS.

The unique and important function of RDM carried out by university libraries today centres around certain components such as the needed infrastructure and resources, policy formulations and framework trainings, data preservation and access, collaborations, etc.

PROVA INFORMATICA EXCEL

Thus, there is a critical need for targeted and accessible professional development initiatives tailored to empower librarians with the competencies required for successful RDM service provision (Mavodza, 2022). However, it is worthy to note that Tang and Hu (2019) hinged their findings on self-reported data among librarians with varied levels of awareness of RDMS. This increases the likelihood of inaccurate reporting of data. Also, this method of data collection is considered a major limitation, as responses are likely to be subjective. A possible solution to this would be the triangulation of data using a combination of semi-structured interviews and surveys.

PROVA INFORMATICA EXCEL

In other words, inappropriate, inadequate and obsolete technology will make RDM seem like a Herculean task and slow down its processes (Nwabugwu and Godwin, 2020). Without this, library personnel would spend more time troubleshooting, dealing with errors or manually compensating for technological shortcomings rather than focussing on the actual management of research data. As university libraries advance technologically, these technologies transform the way informationrelated services are delivered. These technologies positively influence how libraries collect, store, process and disseminate data (Eiriemiokhale and Amzat, 2022). There is, however, much room for improvements and upgrade in the technologies available in university libraries for carrying out diverse information services, including RDM.

DOMANDA N. 20

20. Il/La candidato/a illustri un ipotetico progetto per la digitalizzazione dei servizi bibliotecari di un Ateneo, che tenga conto dei limiti di budget e degli stakeholder coinvolti nel processo.

TESTO DA LEGGERE E TRADURRE:**20.**

Despite existing policies covering quality assurance, research data and intellectual property, the authors highlighted a significant gap: there were no explicit guidelines for managing each stage of data curation and capabilities (Masinde et al., 2021). However, a notable limitation of their study is that it relied on the interviews of only five participants, which is considered a very small sample size. Hence, the findings may not represent the true picture of RDM practices in Kenya. The findings from the study are highly susceptible to social desirability bias given the manner in which the data were collected. In order for university libraries to effectively and efficiently carry out the service of RDM, it is pertinent that requisite training of personnel be put in place to ensure its success.

DOMANDA N. 14

14. L'impatto del "Big deal" e dei "Transformative agreements": come incidono sui servizi della biblioteca e come la biblioteca può riposizionarsi nel nuovo scenario dell'editoria scientifica?

TESTO DA LEGGERE E TRADURRE:

14.

RDM encompasses diverse techniques and approaches that are tailored towards preservation of the visibility of research data, easing access to these data even after the research has been completed. Proper RDM ensures that the data be not just retrievable, comprehensible and understandable during an ongoing research project but also remain that way and useful for future investigations and research studies.

Essentially, RDM creates a framework that extends beyond simple storage; it includes the proper organization, preservation and exchange of data in a way that permits their continued utilization and increases the likelihood of novel findings and scientific breakthroughs (Kuchma, 2021; Orr, 2023).

PROVA INFORMATICA EXCEL

DOMANDA N. 6

6. Le attività di Public engagement della biblioteca nel quadro Terza missione/Impatto sociale dell'Ateneo: norme di riferimento, buone pratiche e possibili soluzioni progettuali e organizzative.

TESTO DA LEGGERE E TRADURRE

6.

Therefore, RDM involves the deliberate management of activities within the research data life cycle, which Ashiq et al. (2021) described as covering the activities of planning, organizing, creating, storing, security, retrieval, sharing and reusing of data. Some of these activities fit into the conventional practices and function of university libraries, which made it easier for them to accommodate RDMS into their service structure.

A prominent research work that affirmed the relationship between RDM and university libraries was that of Andrikopoulou et al. (2022). An analysis of the study revealed that while libraries are well positioned to deliver RDMS and have great potential to do this, certain issues (drivers and factors) need to be addressed by further quantitative and qualitative work in order to strengthen the ongoing development of RDM in university libraries. Andrikopoulou et al. (2022) suggested that skill gaps and inadequate technological infrastructure can constrain the development of RDM programmes in university libraries.

The adoption of a qualitative method of literature review was informed by the need to understand existing knowledge and findings around the focus theme of this study, thereby aligning with Echedom and Okuonghae (2021). To ensure the study was carried out in a clear and well-defined manner, existing literature around the theme of the study was systematically selected using the following predefined keywords/search terms: 'data literacy and research data management', 'technological infrastructure and research data management' and 'research data management services'. The selection of the literature was conducted from three academic databases, namely Emerald, ProQuest and Google Scholar. The selection of the literature was conducted from three academic databases, namely Emerald, ProQuest and Google Scholar.

DOMANDA N. 7

7. Il rinnovo o la dismissione di abbonamenti a periodici e banche dati sottoscritti nell'ultimo triennio: metodi e strumenti applicabili alla valutazione, anche tenendo conto dei principi di cui all'art. 1 legge 241/1990

TESTO DA LEGGERE E TRADURRE:

7.

The basic element of any RDM project is data, and as such, competence in handling data is required for the successful execution of RDM projects. However, data literacy is not a common literacy-type, especially among university library personnel in the Global South (Global Voice Group, 2020; Moyo and Bangani, 2023), when compared to those of the Global North (Burruss et al., 2020). However, a study carried out in Bulgaria, which is considered to be a Global North country by World Population Review (<https://worldpopulationreview.com/country-rankings/globalnorth-countries>), found that RDM awareness and skills are still far from satisfactory, implying a general need to address RDM concerns.

Inadequacy of technological infrastructure has continued to be an issue, particularly among universities in the Global South, which could hinder the development of RDM or the delivery of RDMS in these university libraries. Although some university libraries may already have technology processes that facilitate RDM, it is imperative to provide programmes that educate or train library and information science (LIS) professionals on the fundamentals of research data literacy (Nwabugwu and Godwin, 2020). This suggests that technological infrastructure and data literacy are essentials of RDM in university libraries.

It is the position of the present study that future research should expand on this and address other variables/factors influencing RDM practices in libraries.

Achieving RDM through technological revamp in university libraries.

Research data management carries great value in the academic environment, especially while conducting academic research. Specifically, RDM is instrumental for the preservation of research output, reproducibility of research, enhancing collaborations and ensuring transparency in research methodologies. These functions can be financially easily attained with the acquisition and deployment of proper technological infrastructures.

26. Gli indicatori bibliometrici nella valutazione della ricerca e le principali banche dati citazionali. Come la biblioteca può supportare i ricercatori e i dipartimenti nei processi di assicurazione della qualità?

TESTO DA LEGGERE E TRADURRE:

26.

The absence of targeted training programmes and educational initiatives has hindered these professionals from acquiring the specialized skills required to perform optimally within the domain of RDMS. This implies that the possession of relevant skills and competences is germane to the development of RDMS in university libraries. Furthermore, while RDMS is applicable to different kinds of libraries, the constraints of RDM practices may vary significantly from one academic domain to the other.

Significantly more institutions in the USA (66.0%) provided data organization/curation services as compared to non-USA (35.7%) locations. Significantly more institutions in the USA (72.3%) provided metadata services compared to non-USA countries (42.9%). Finally, a significantly higher number of institutions in the USA (70.2%) provided data visualization services compared to institutions in non-USA countries (21.4%). By implication, libraries in highly developed countries like the USA could be more prepared to deliver RDMS than institutions in other countries, particularly in the Global South.

34.

This ongoing training will ensure that data librarians remain well-equipped to effectively support researchers, manage data repositories, implement best practices in data curation and contribute meaningfully to the evolving landscape of information management. Nwabugwu and Godwin (2020) unequivocally noted from the findings of their study on RDM and information security that a number of the university libraries studied encouraged such training programmes as a stride towards the implementation of RDMS.

DOMANDA N. 31

31. L'organizzazione degli spazi e dei servizi per una biblioteca accessibile e inclusiva: criticità e possibili soluzioni.

TESTO DA LEGGERE E TRADURRE:

31.

The UN's Data Revolution website [<https://www.undatarevolution.org/>] describes it as the intersection or common joining point between information literacy, statistical literacy and technical literacy. This competency has become vital for potential data management professionals (Koltay (2017), including LIS professionals who are currently taking up RDM-related roles, particularly in university libraries. Empowering librarians with data literacy competence would provide a solution to the existing gap in RDM understanding. Carmi et al. (2020), in their study, found a gap in the understanding (an understanding gap) of data management best practices and asserted that data literacy training would be a way of bridging this gap.

DOMANDA N. 35

35. Organizzare un servizio di reference innovativo. Quali accorgimenti e quali strategie organizzative e comunicative?

TESTO DA LEGGERE E TRADURRE:

35.

Subaveerapandiyar (2023) listed some of the data literacy skills that should be developed towards RDM practices in institutions, including metadata management, ontology, collaboration skills, data mining, re-use, visualization, retention and storage skills, and data management plan. Adika and Kwanya (2020) measured RDM literacy levels assessing planning, finding, organizing, storing, security and sharing research data. These are areas need to be covered in data literacy programmes. RDM instruction programmes aimed at training academic library professionals from the study of Xu (2022: 16) focussed on 'data sharing, RDM overview, data storage, DMP, data documentation, RDM ethics, data visualization & analysis, data security and RDM tools'.

Moreover, the study discusses the relationship between technological infrastructure and RDM in university libraries, hereby justifying the need for technological revamp. Some specific technologies are mentioned in the course of the discussion. The study concludes that data literacy and adequate technological infrastructure for RDM are required for university libraries to realize their full potential in the management of research data.
