

Erasmus+

Blended Intensive Programme (BIP) 2026

Individual Differences in Mind and Brain

This Erasmus+ summer school will bring together students and leading researchers from across Europe to study how and why people differ in their mind, behavior, and brain function.

Through online seminars and an intensive week of lectures, workshops, and discussions we will bridge psychology and neuroscience in an interdisciplinary setting, while fostering intercultural exchange, collaboration, and scientific dialogue. By integrating diverse perspectives on brain and behavioral variability, the programme provides a unique platform for developing innovative approaches to psychological and neuroscientific research, in an engaging social environment, including experiential activities and cultural events

Hosted by: University G. d'Annunzio of Chieti-Pescara (Italy) – Department of Psychology (DIPSI) and Department of Neuroscience, Imaging and Clinical Sciences (DNISC)

Partner Institutions: Stockholm University (Sweden) (SU), Iscte - University Institute of Lisbon (Portugal)

Organizers: Carlo Sestieri & Giorgia Committeri (UdA), Ronald van den Berg (SU), César Lima (iscte)

May 25-29
Online seminars

June 8-12
